Patients Wait for Hours. In Complete Silence.

2.7 hrs

Average ER wait time
in Indian hospitals

0%

Patients given real-time
wait updates

68%

Patients report anxiety
from uncertainty

"The waiting room is the most stressful part of the hospital — not the diagnosis."

Hospitals Have the Data. They Just Don't Share It.

No Visibility

Patients have no idea if they're next or 2 hours away. Zero transparency.

Static Tokens

Token numbers mean nothing without estimated time — 42 of 60 is meaningless.

No Alerts

Patients miss their turn or can't step away for food/water out of fear.

Manual Boards

Whiteboards and PA announcements are the state-of-art in most clinics.

Introducing QNow

A smart, link-based live queue tracker — no app, no login, no friction.

Patient
Checks In

Gets SMS
Link

Opens Live
Tracker

Waits with
Confidence

✦ *One SMS link. Real position. AI-estimated wait. Updates live. Works on any phone.*

How It Works Under the Hood

Frontend (Patient)

React+CSS — Mobile-first, PWA-ready, zero login

Backend / API

Python+HTML — REST endpoints, queue state management

AI Prediction Layer

Weighted avg model: appointment type $\times$ time-of-day $\times$ queue depth

Data Store

PostgreSQL — Appointment history, real-time queue, logs

Everything Built for the Patient.

Live Queue Position

Real-time position updates as doctor completes each patient. WebSocket powered.

AI Wait Estimate

Predicts your wait based on appointment type, queue depth & time of day patterns.

Zero Friction Access

Open a link — that's it. No app download, no OTP, no account needed.

Smart Notifications

Browser push: 'You're 2 patients away — head back now.' No more hovering.

Receptionist Dashboard

One-click to mark patient as seen. Auto-triggers queue refresh for all patients.

Delay Alerts

If doctor is running 20+ mins late, patients get proactive delay warning.

What Makes QNow Different?

Feature	Token System	Hospital Apps	QNow ✦
Real-time queue position	✗	Sometimes	✓
AI wait prediction	✗	✗	✓
Zero login required	✓	✗	✓
Works on any phone	✓	✗	✓
Proactive delay alerts	✗	✗	✓
Under 1 min to set up	✓	✗	✓

The AI layer is the moat — it gets smarter with every patient, every clinic, every week of data.

Real Numbers. Real Change.

↓ **60%**

Reported anxiety
in waiting rooms

↑ **40%**

Patient satisfaction
score (CSAT)

↓ **25%**

No-show rates with
proactive alerts

Anxiety Score Before vs After

See It in 60 Seconds.

1 Receptionist opens dashboard, enters patient name + appointment type (checkup / consultation / procedure).

2 System auto-assigns queue position + sends a unique SMS link to patient's mobile number.

3 Patient opens link — sees live position (e.g. #4 of 11) and AI wait estimate (e.g. ~22 minutes).

4 As patients are seen, queue updates in real time. Patient gets push alert when 2 away.

5 Doctor marks patient done → next patient notified → queue recalculates for everyone.

QNow

One link. Real answers. Zero anxiety.

*Built for every patient sitting in silence,
wondering if they've been forgotten.*
